NagriVanta

User Guide: from pothole to proof of fix

How to use every feature of NagriVanta, the AI-powered civic issue reporting and resolution platform, as a citizen, a department officer or an administrator.

12. The mobile app
13. Feature quick reference
14. Help, privacy & emergencies

The idea in one line

AI recommends. Rules validate. People decide. You report a problem in seconds, the platform sends it to the right team with a deadline, and you see verified proof when it is fixed. Every step is recorded in a tamper-evident history.

Three kinds of users

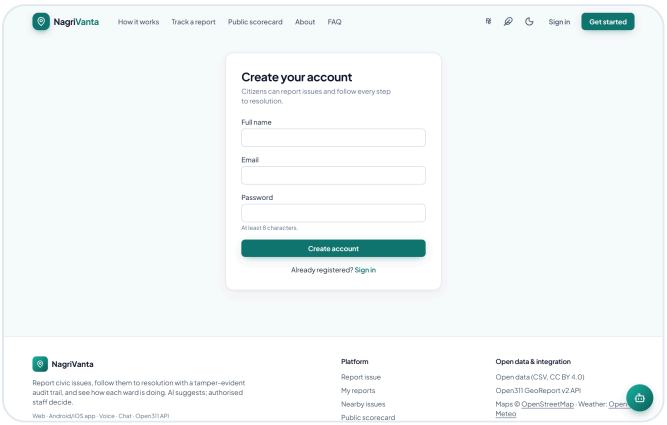

Role	What you do	Where to start
Citizen	Report issues, support nearby issues, track progress, rate fixes, reopen if the problem returns.	Report issue · My reports · Nearby issues · Profile
Department officer	Work through assigned cases, post updates, resolve with an after-photo.	My queue · Profile
Administrator	Confirm AI triage, assign departments and officers, monitor deadlines, analytics and risk alerts.	Triage queue · Analytics

No account yet? You can still read *How it works*, *FAQ* and *About*, see the *Public scorecard*, and *Track a report* by its reference ID. These are in the top navigation when you are signed out.

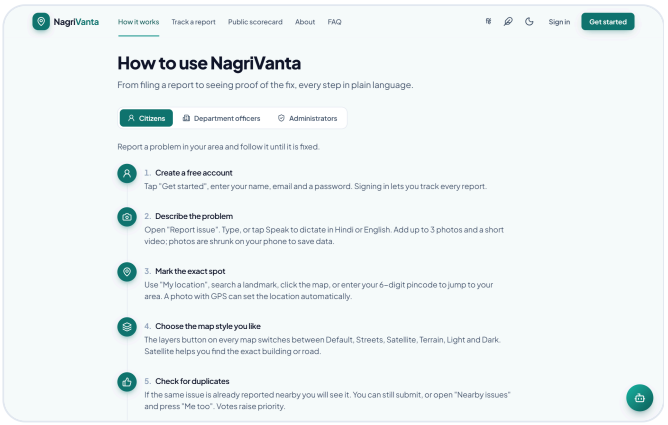

1. Getting started

Open the website on any phone or computer. Signing up is free.

1. Open **nagrivanta-web.vercel.app**. Signed out, the top bar shows **How it works · Track a report · Public scorecard · About · FAQ**.
2. Click **Get started**, enter your full name, email and a password (8+ characters), and press **Create account**.
3. You land on the report form. Next time, use **Sign in**.
4. The buttons at the top right switch **हिं / EN** (language), **Lite mode** (feather icon, saves data) and **light/dark mode** (moon/sun).

Create an account.

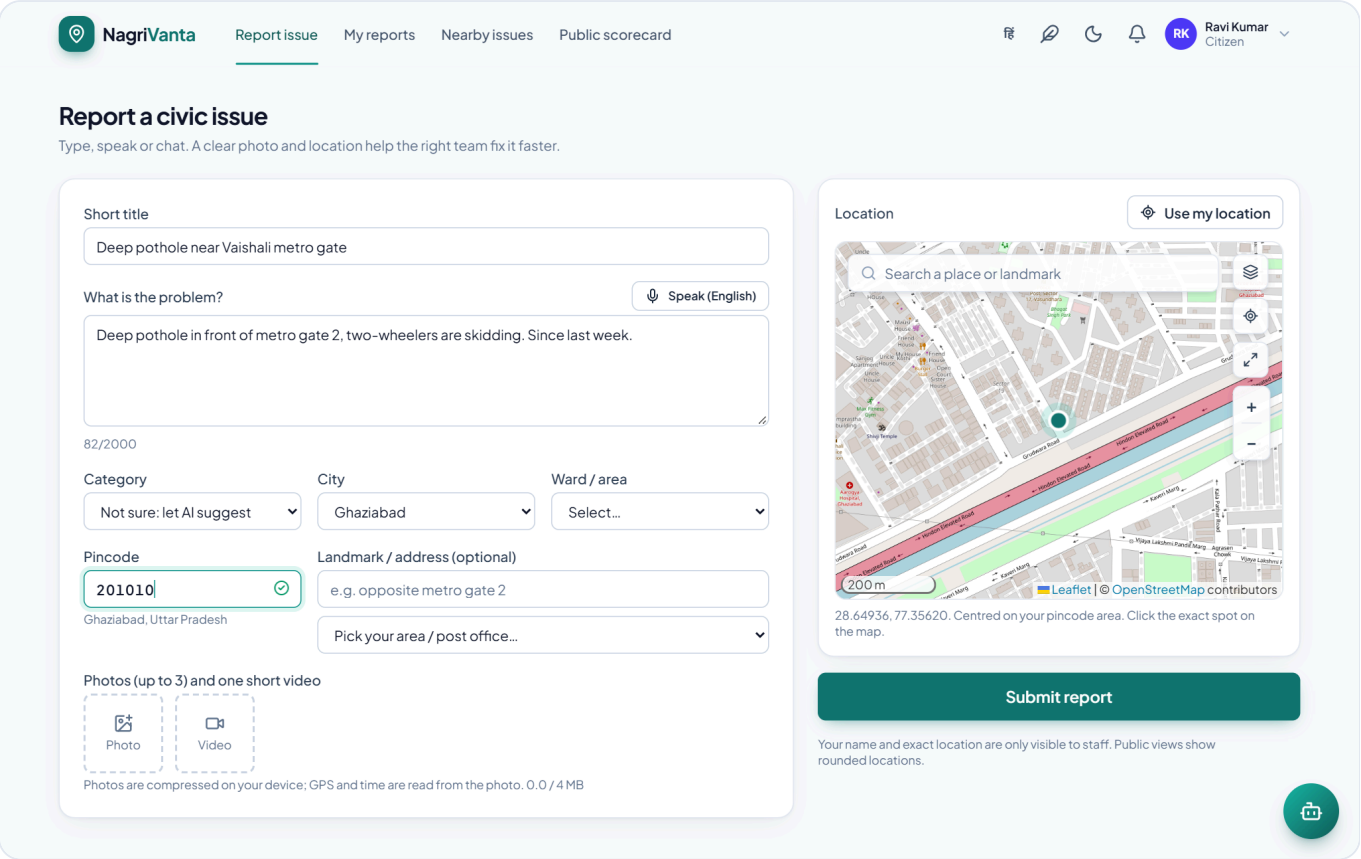

"How it works": step-by-step instructions for citizens, officers and admins, in English and Hindi.

Install it like an app: in Chrome or Edge, use "Install app" / "Add to Home screen". It then opens full-screen and keeps working with a weak signal.

2. Reporting an issue

Open **Report issue**. A clear description, the exact spot and a photo get it fixed faster.

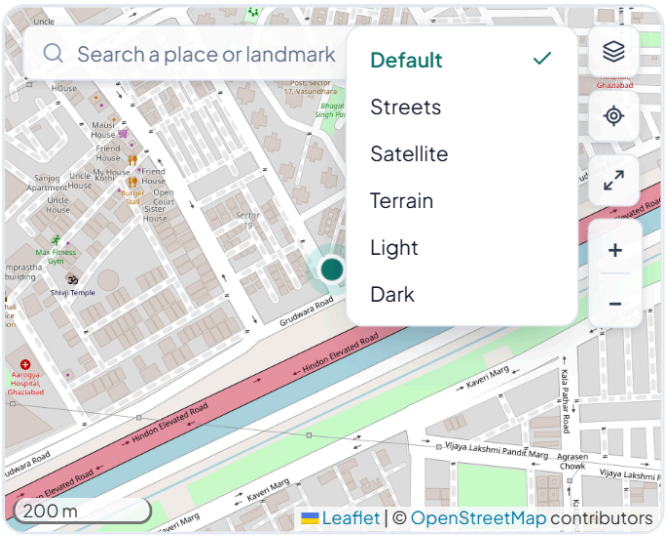

The report form: title, description (type or speak), category, city/ward, pincode with automatic area lookup, landmark, photos/video and the location map.

1. **Short title**, e.g. "Deep pothole near Vaishali metro gate".
2. **What is the problem?** Type in English, Hindi or Hinglish, or press **Speak** and talk (Chrome, Edge, Safari). The language follows the हिं/EN switch.
3. **Category:** pick one, or keep **"Not sure: let AI suggest"**.
4. **Pincode:** type your 6-digit pincode. NagriVanta looks up the **district and state**, fills the **city**, centres the map on your area and lists the **post-office areas**; choosing one adds it to the address.
5. **Landmark / address:** when you drop a pin, a suggestion such as "Use: Yashoda Marg, Vaishali, Ghaziabad" appears; tap it to fill the field. The pincode is also filled from the map if empty.
6. **Photos and video:** up to 3 photos and one short video (under 3 MB). Photos are compressed on your phone. If a photo has GPS, the location can come from it.
7. **Location:** press **Use my location**, search a landmark, or click the exact spot on the map (see chapter 3).
8. If a **similar report already exists nearby**, it is shown on the right. You can still submit, or support the existing one with "Me too".
9. Press **Submit report**. You immediately get a **reference ID** like `CIV-261028-1A2B3C4D`, plus buttons to **Track this report** and **Share tracking link**.

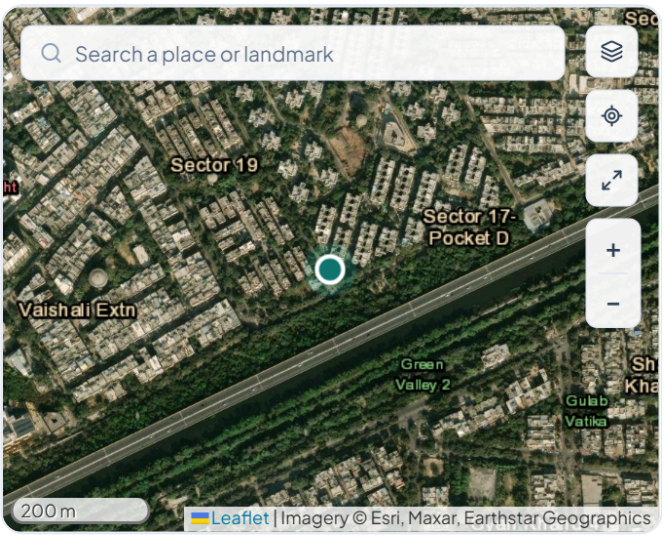

What happens next: an offline AI model suggests the category, summary and priority at once, and **smart routing** sends confident reports straight to the right department and its least-busy officer. Seconds later, **Gemini AI** re-checks the text *and the photo* in the background. If it disagrees, an administrator is alerted rather than the case being changed silently.

3. Using the map like a map app

Every map in NagriVanta has the same controls on the right-hand side.

The **Map style** menu (layers button).

Satellite view with place labels: find the exact building or road.

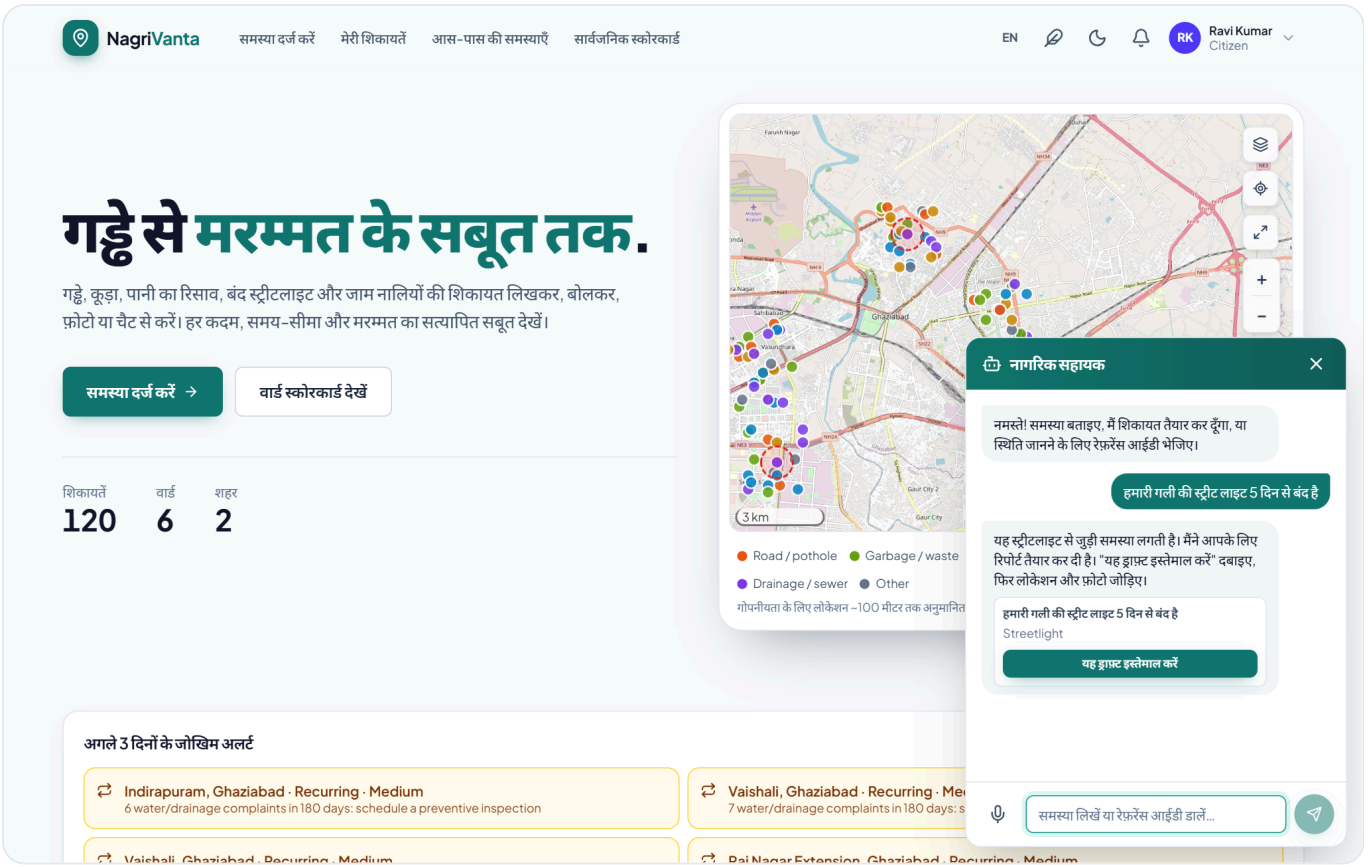

Control	What it does
Layers (top button)	Choose the map style: **Default** (follows light/dark mode), **Streets**, **Satellite**, **Terrain**, **Light**, **Dark**. Your choice is remembered on this device.
Search box (report map)	Type a place or landmark, e.g. "Kavi Nagar Ghaziabad", and pick a result. The map flies there and moves the pin.
My location (target icon)	Shows you as a blue dot with its accuracy circle; on the report map it also sets the pin.
Full screen	Opens the map across the whole screen. Press `Esc` or the button again to exit.
+ / − and scale bar	Zoom in and out; the bar at the bottom left shows the distance.

On the dashboards, dots are reports coloured by category, and **dashed red rings** are **hotspots**: places where the same problem was reported 3+ times in 90 days.

Lite mode hides map tiles to save mobile data; the dots and your pin still work.

4. The AI civic assistant

The round button at the bottom right of every page opens the assistant (chat channel).

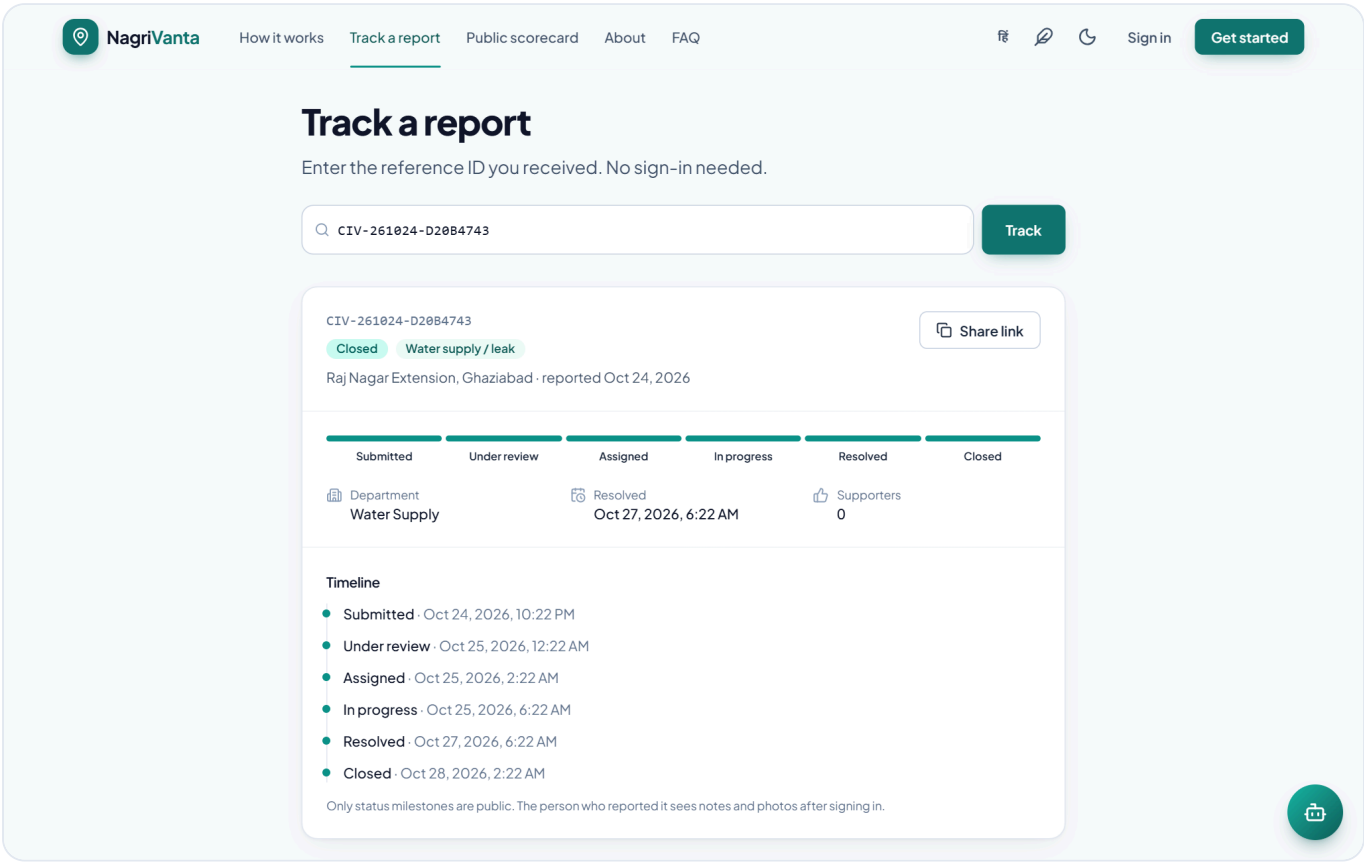

The assistant understood a Hindi message about a broken streetlight and drafted a report. The whole interface is in Hindi here (हिं switch).

- **Describe a problem** ("pipe se paani beh raha hai", "There is a big pothole near the market"): it drafts a report with title, description and category. Press **Use this draft** to open the report form pre-filled, then add the location and a photo.
- **Paste a reference ID** to hear its status. Signed in, it also tells you the target date of your own cases.
- **Ask a question**: how to report, how long it takes, who can see your data.
- Press the **microphone** to speak instead of typing.
- For emergencies it always tells you to call **112**.

5. Tracking a report & nearby issues

Track without signing in

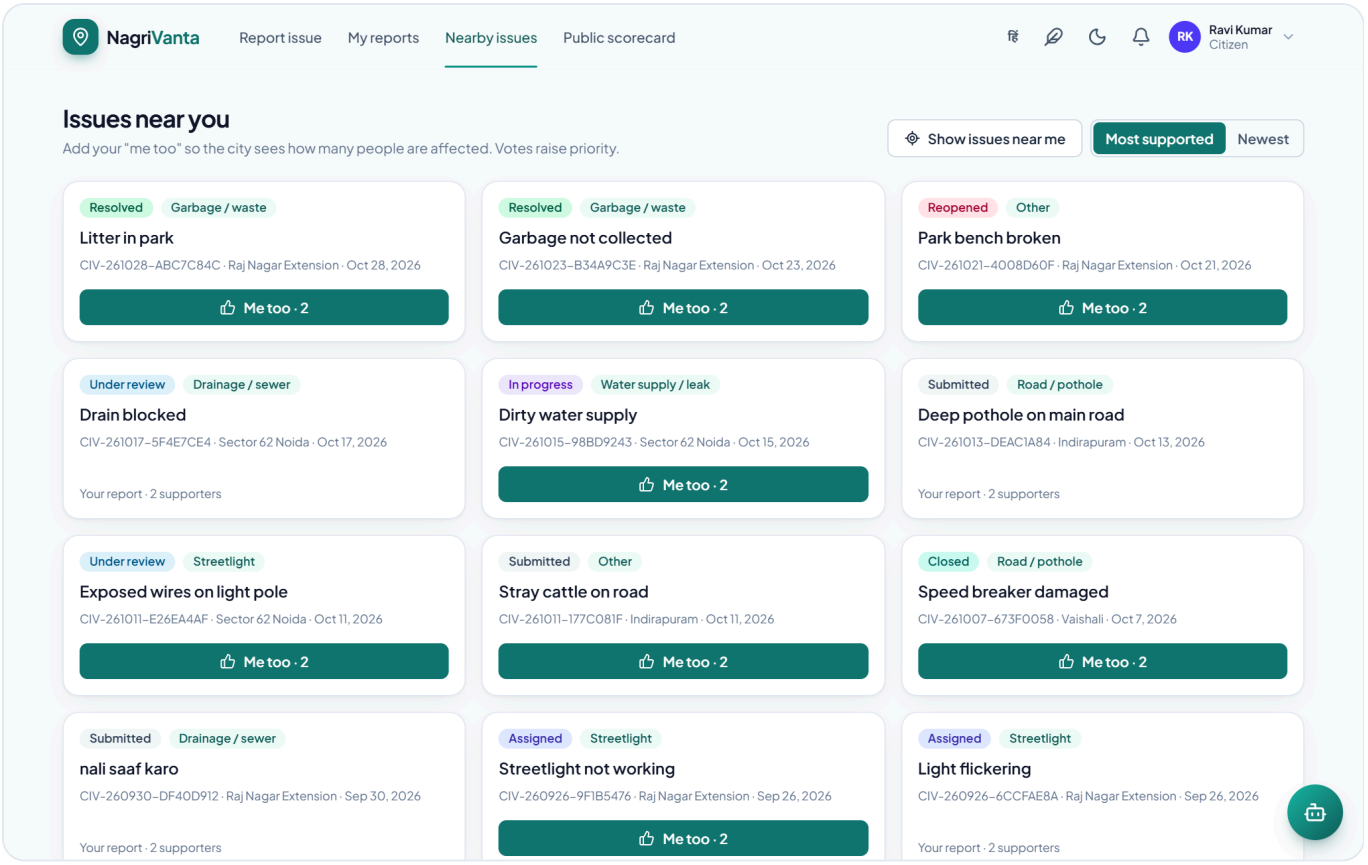

Open **Track a report**, paste the reference ID and press **Track**. You see the progress bar, department, target date, number of supporters, the evidence-check result and the status timeline. Only milestones are public: no names, notes or exact location. Use **Share link** to send it to someone.

Public tracking page.

Nearby issues & "Me too"

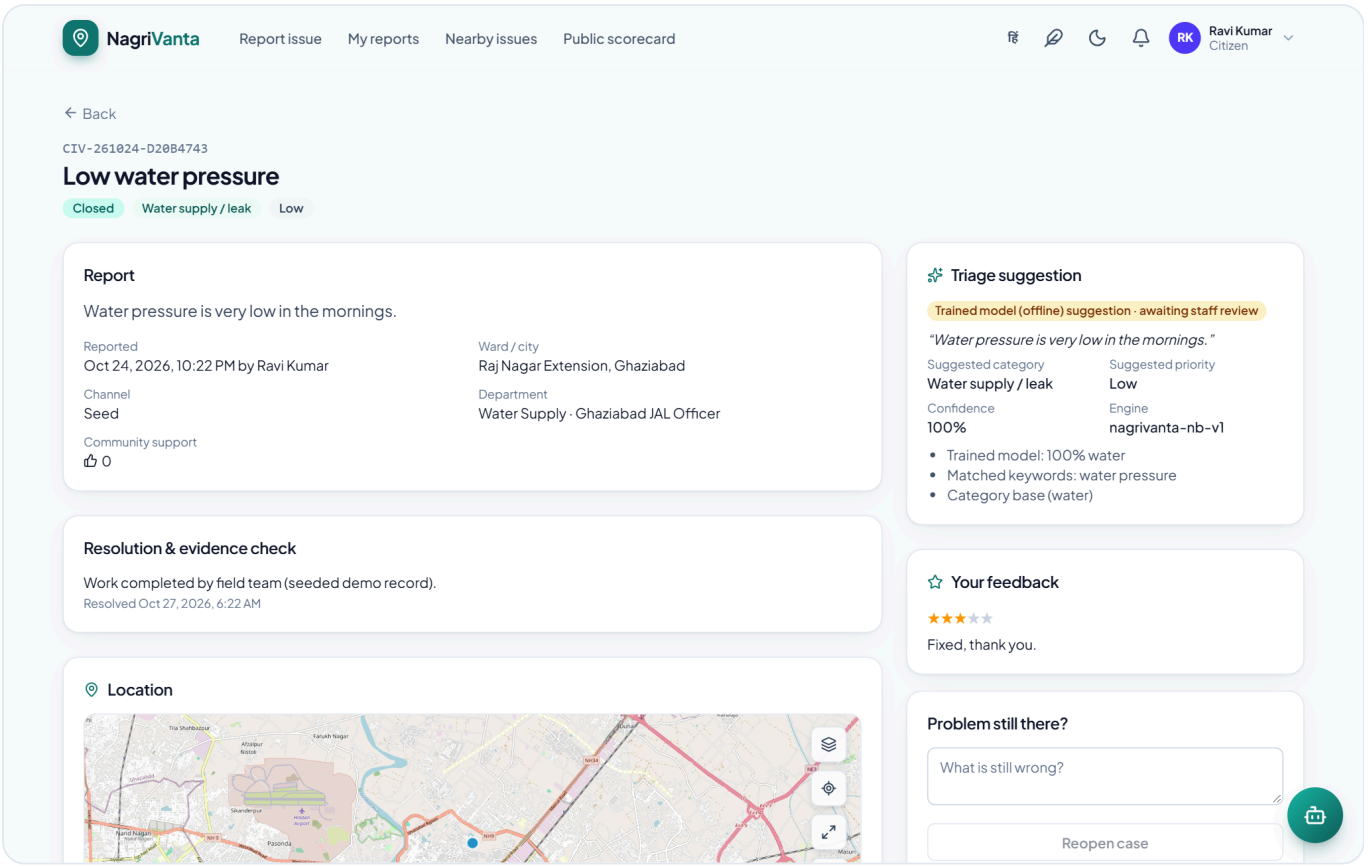

In **Nearby issues**, press **Show issues near me** and sort by **Most supported** or **Newest**. Press **Me too** on a problem that affects you as well: each citizen can vote once, and votes raise the priority score until staff confirm a priority. Press it again to remove your vote.

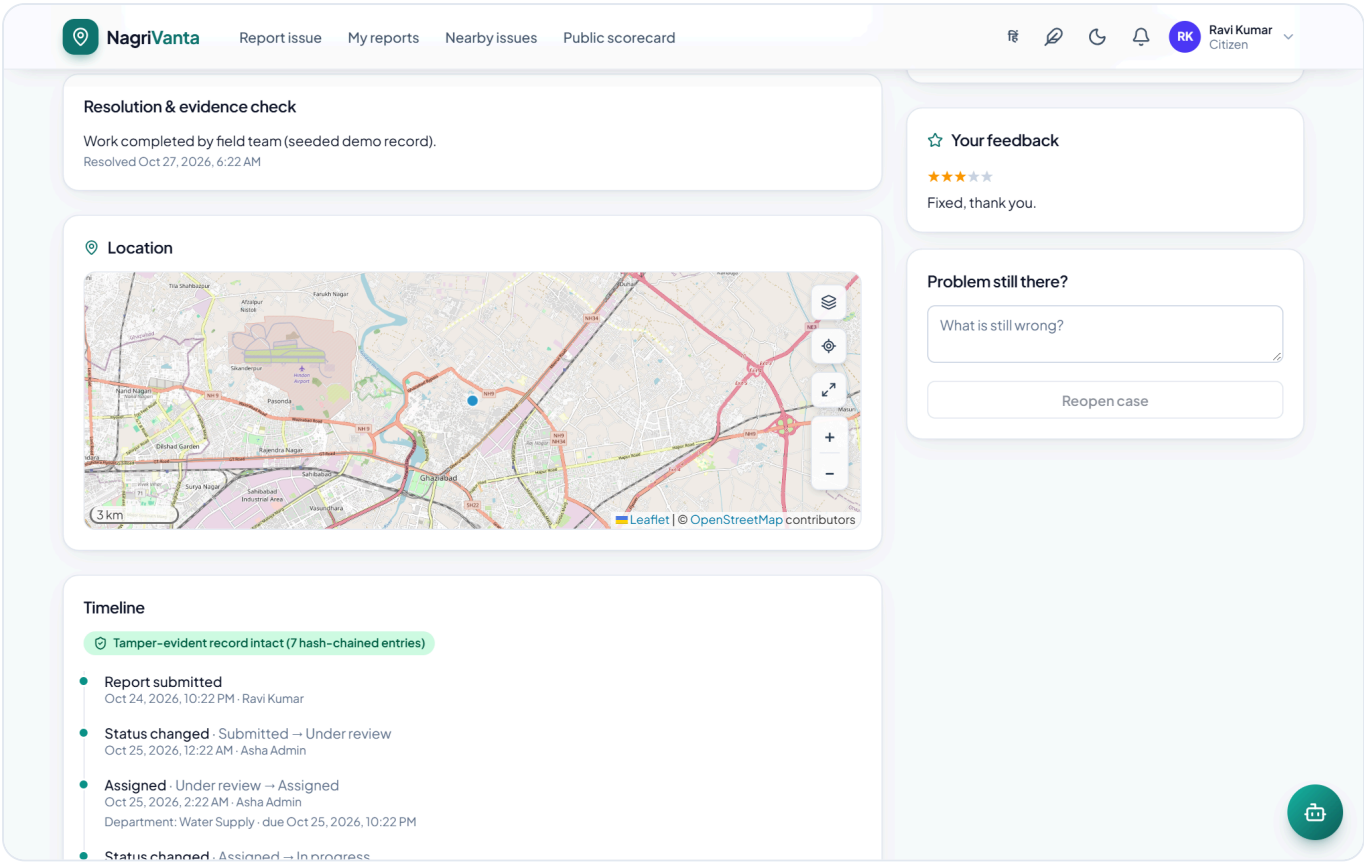

Nearby issues with "Me too" votes.

6. Your case page & proof of fix

Open any report from **My reports**, a notification or your profile.

A case: status, category, priority, target date, description, channel, department, AI suggestion with reasons.

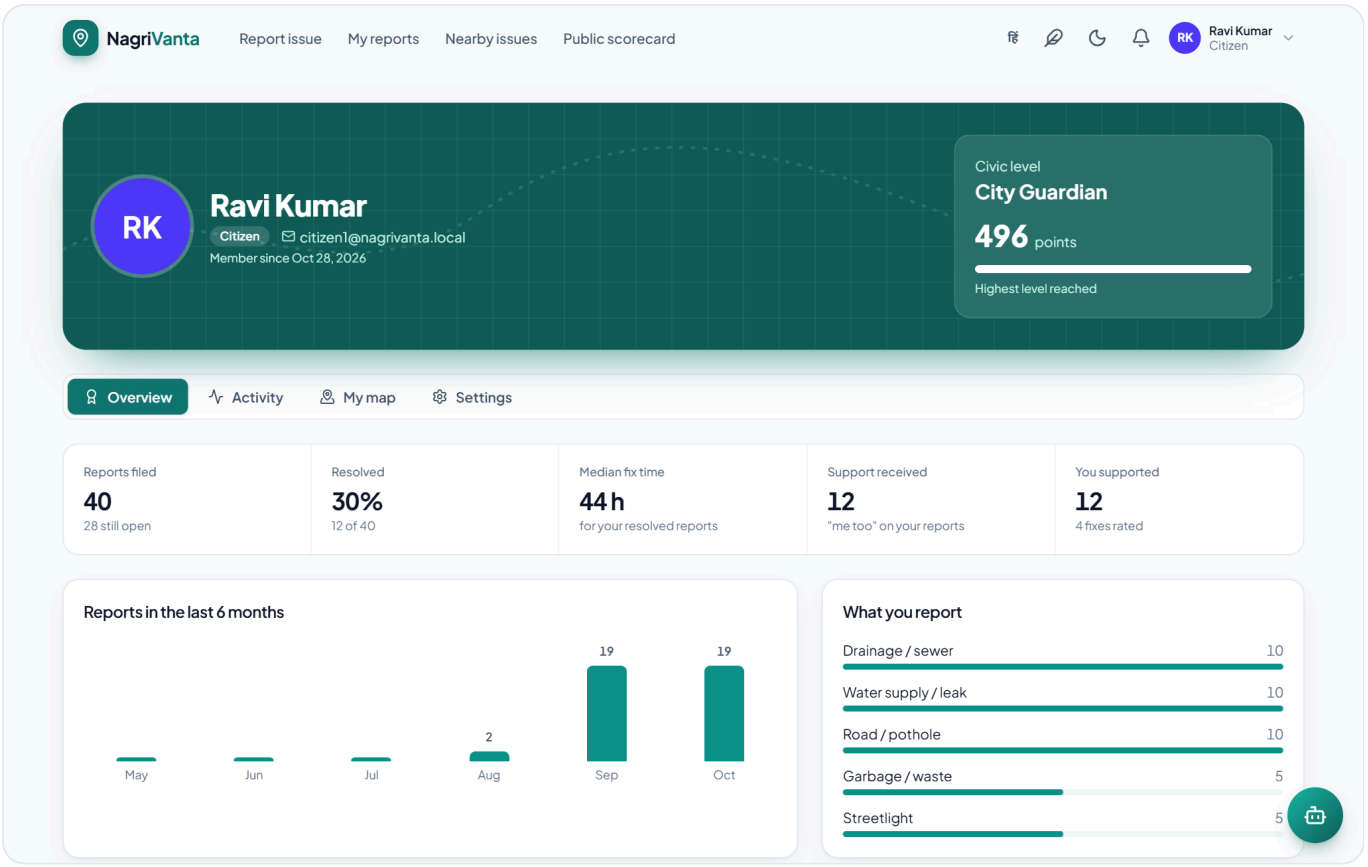

Resolution note, your rating, the "Problem still there?" reopen box, and the timeline with its "tamper-evident record intact" badge. Cases resolved in the app also show the before/after photos and every evidence check here.

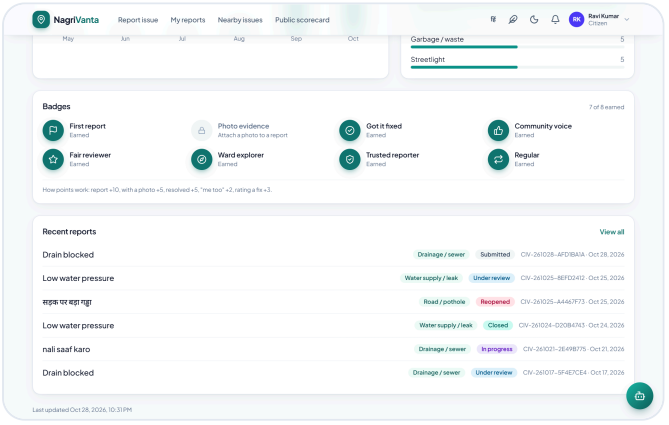

- **Timeline:** every step with who and when. The green badge confirms the hash-chained history has not been altered.
- **Evidence check:** the after-photo must be new, not reused anywhere, taken after your report and near the spot (when the photo has GPS), plus an **AI before/after comparison**. "Needs review" alerts an administrator.
- **Was it fixed?** Rate 1–5 stars (this closes the case), or **Reopen** within 30 days with a reason if the problem is back.
- The page refreshes itself, so new updates appear without reloading. You also get notifications (bell icon, and browser notifications if you allow them).

7. Your profile

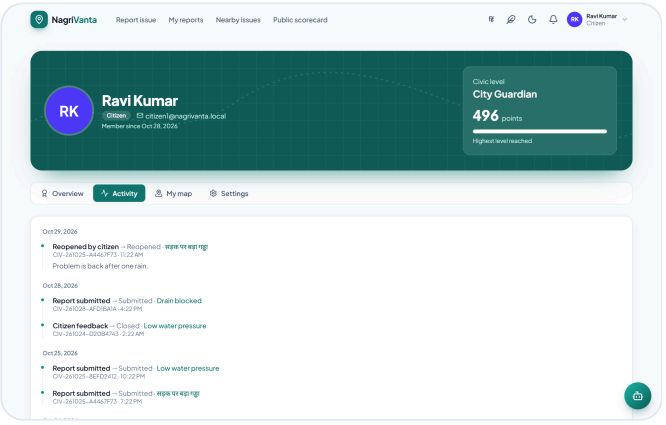

Click your avatar at the top right and choose **My profile** (or tap your name in the mobile menu).

Profile header with civic level and points, tabs, and your key numbers.

Monthly chart, what you report, and badges.

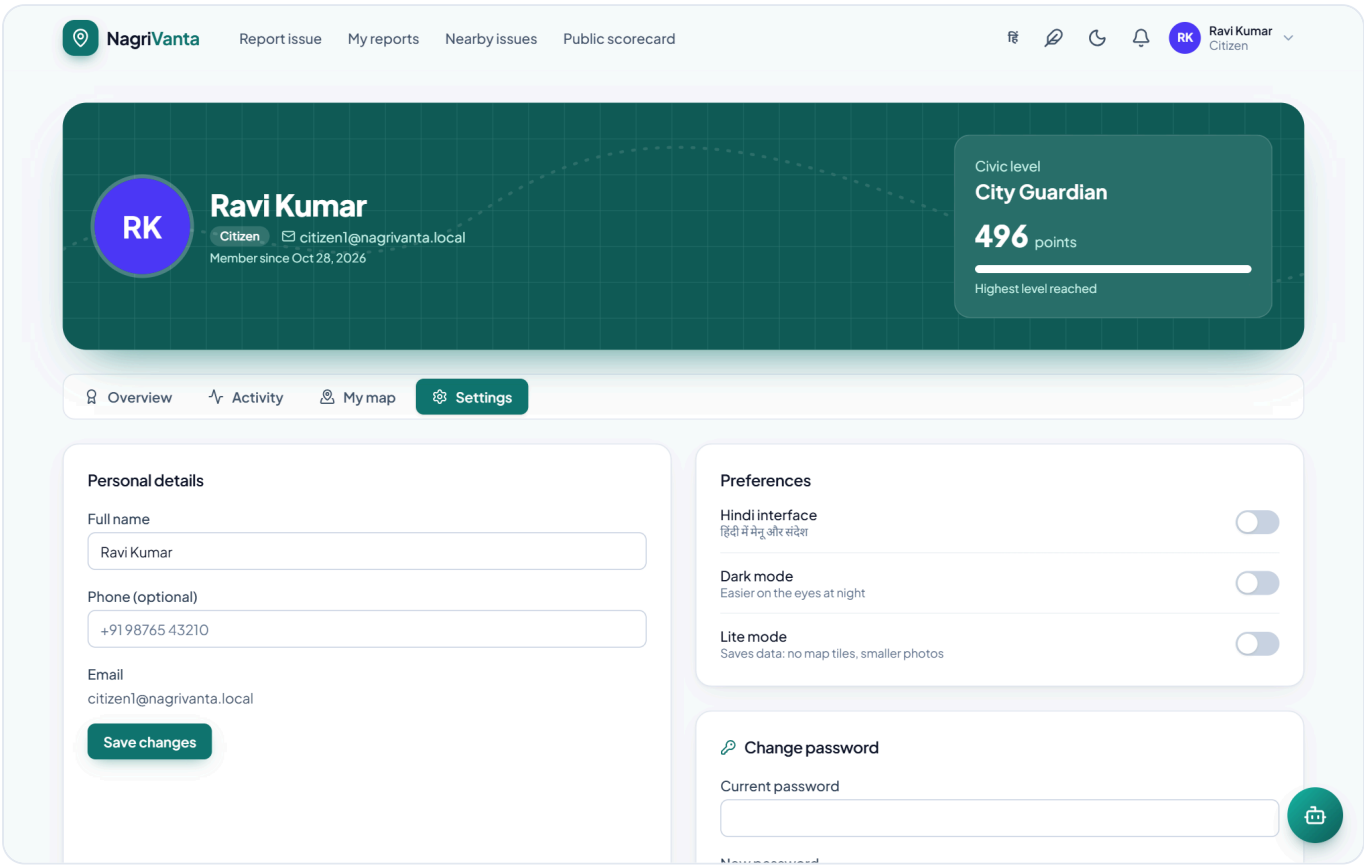

Activity: everything you did, by day.

Tab	What you find
Overview	Reports filed and still open, resolution rate, median fix time, "me too" support you received and gave; reports per month; categories; **8 badges** (First report, Photo evidence, Got it fixed, Community voice, Fair reviewer, Ward explorer, Trusted reporter, Regular); recent reports.
Activity	Your full history, grouped by day, linked to each case.

My map	Every place you reported, with all map styles. Click a dot to open the case.
Settings	Edit name and phone; turn on Hindi, dark mode and Lite mode; change your password.

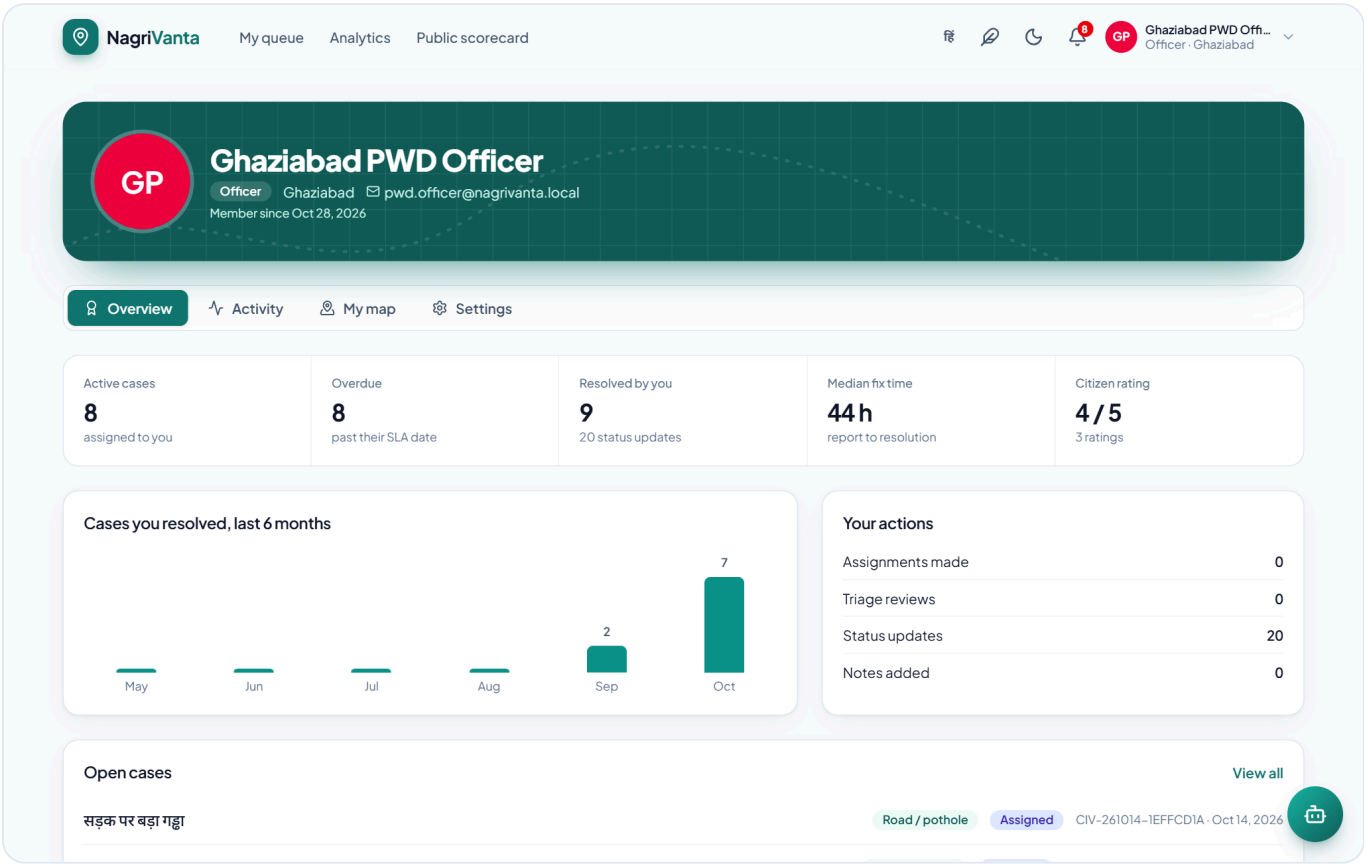

Civic points: report +10, report with a photo +5, resolved +5, "me too" +2, rating a fix +3. Levels: Newcomer → Active Citizen (30) → Neighbourhood Watch (80) → Civic Champion (160) → City Guardian (300).

Settings tab.

8. For department officers

1. Sign in and open **My queue**. It lists cases assigned to you or your department. Filter by status, category, priority, or tick **Overdue only**. **AUTO** marks cases smart routing gave you.
2. Open a case and use **Update status → In progress** when work starts.
3. Use **Add note** to post progress. Leave "Internal only" unticked so the citizen sees it.
4. When done, choose **Resolved**, write what was done, and attach a **fresh after-photo** (required, even when re-resolving a reopened case). Take it on site with the phone's location on, so the GPS check passes.
5. If you are stuck, use **Blocked** with a reason.

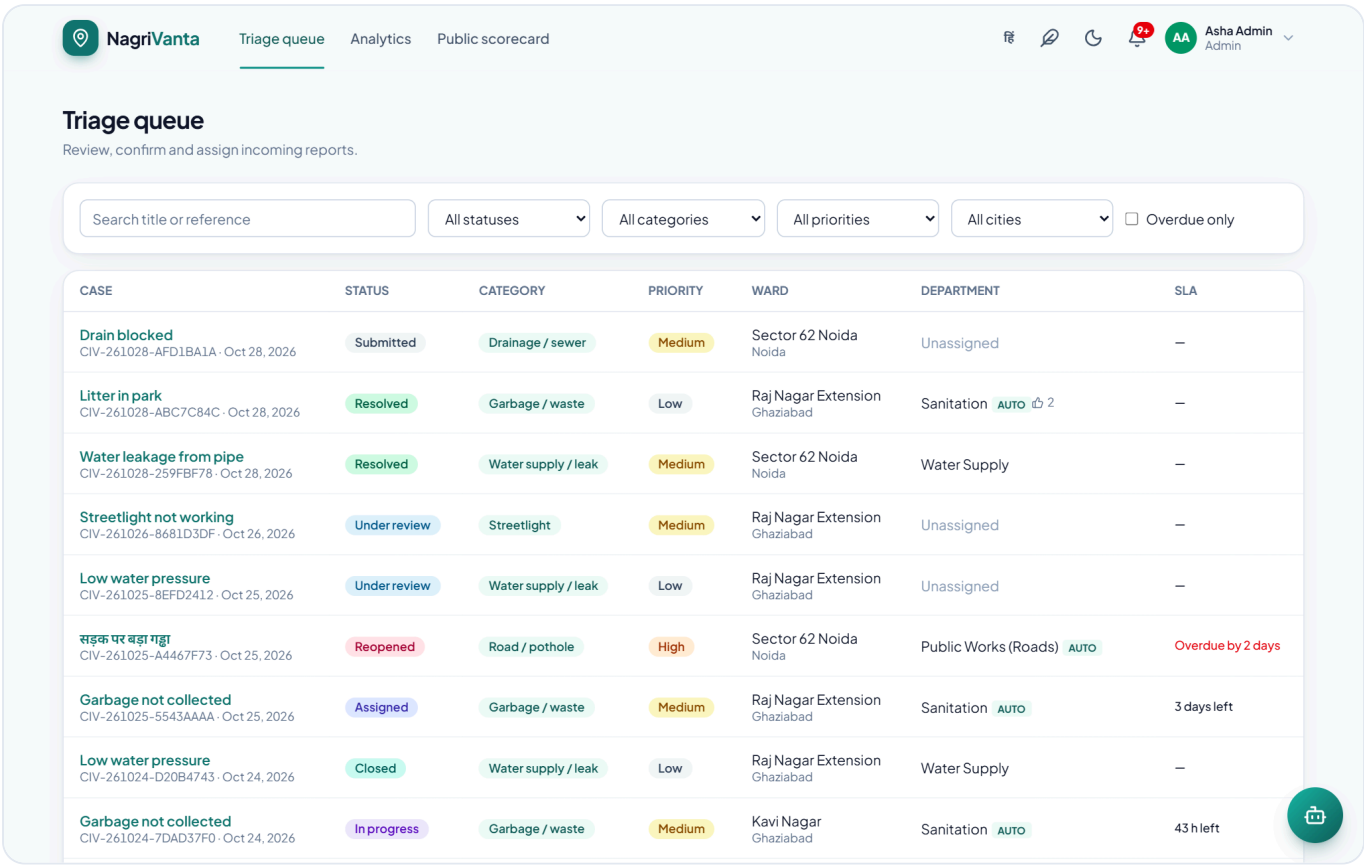

Officer profile: active and overdue cases, resolved by you, median fix time, citizen rating, your actions.

Deadlines: every assigned case has a target date (by default critical 8 h, high 24 h, medium 3 days, low 7 days). Overdue cases are escalated to administrators automatically.

9. For administrators

Triage queue

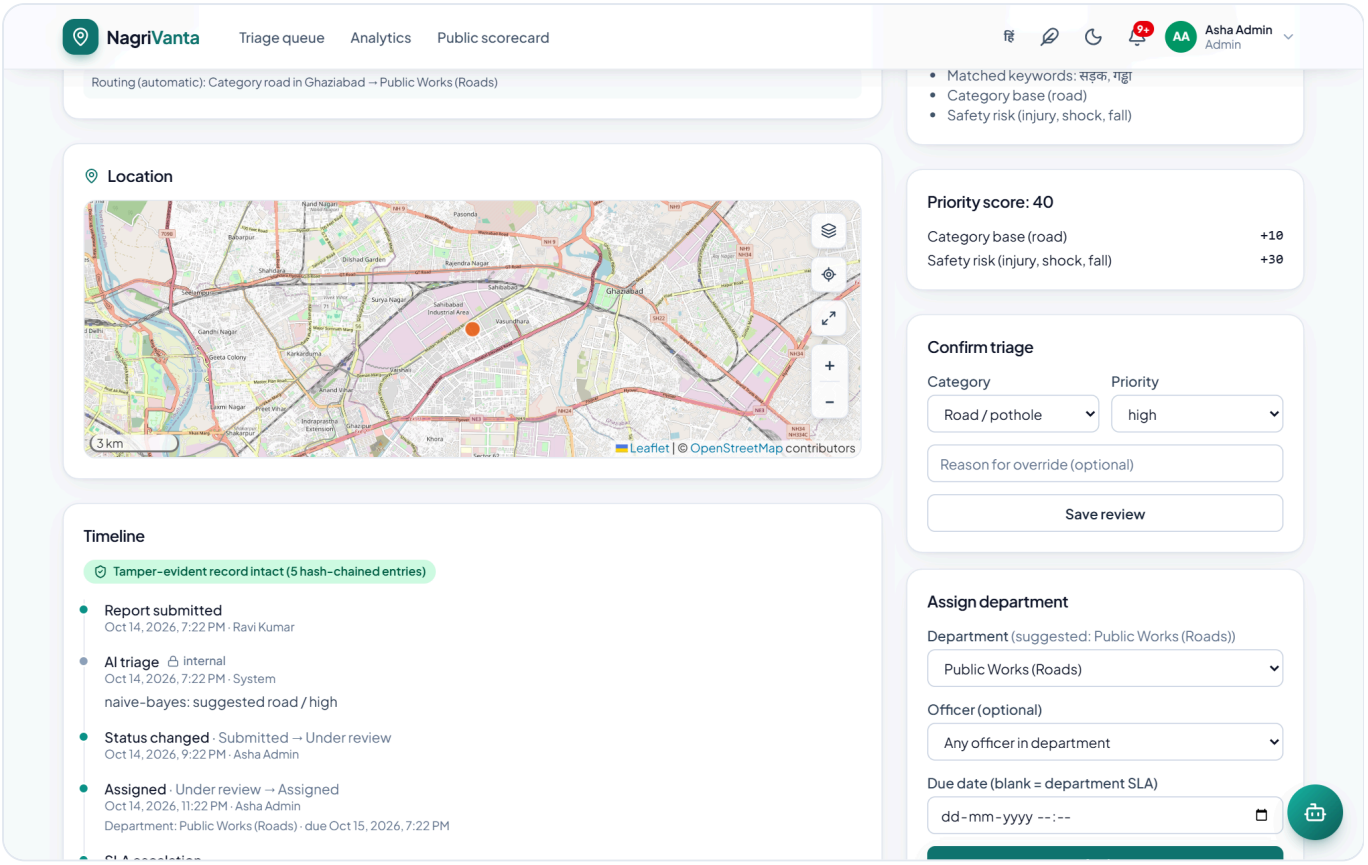

All cases across cities. Filter by city, status, category, priority or overdue. An amber "AI: …" note shows where the AI category differs from the current one.

Triage queue.

Working a case

- **Confirm triage:** check the AI suggestion, its reasons and the **priority score** (each factor with its points), then confirm or correct the category and priority. Add a reason for overrides; it is logged.
- **Assign department:** the suggested department is pre-selected. Optionally choose an officer and a due date (blank = department SLA).
- **Possible duplicates:** nearby similar reports with the signals that matched (distance, wording, category, photo). They are never merged automatically.

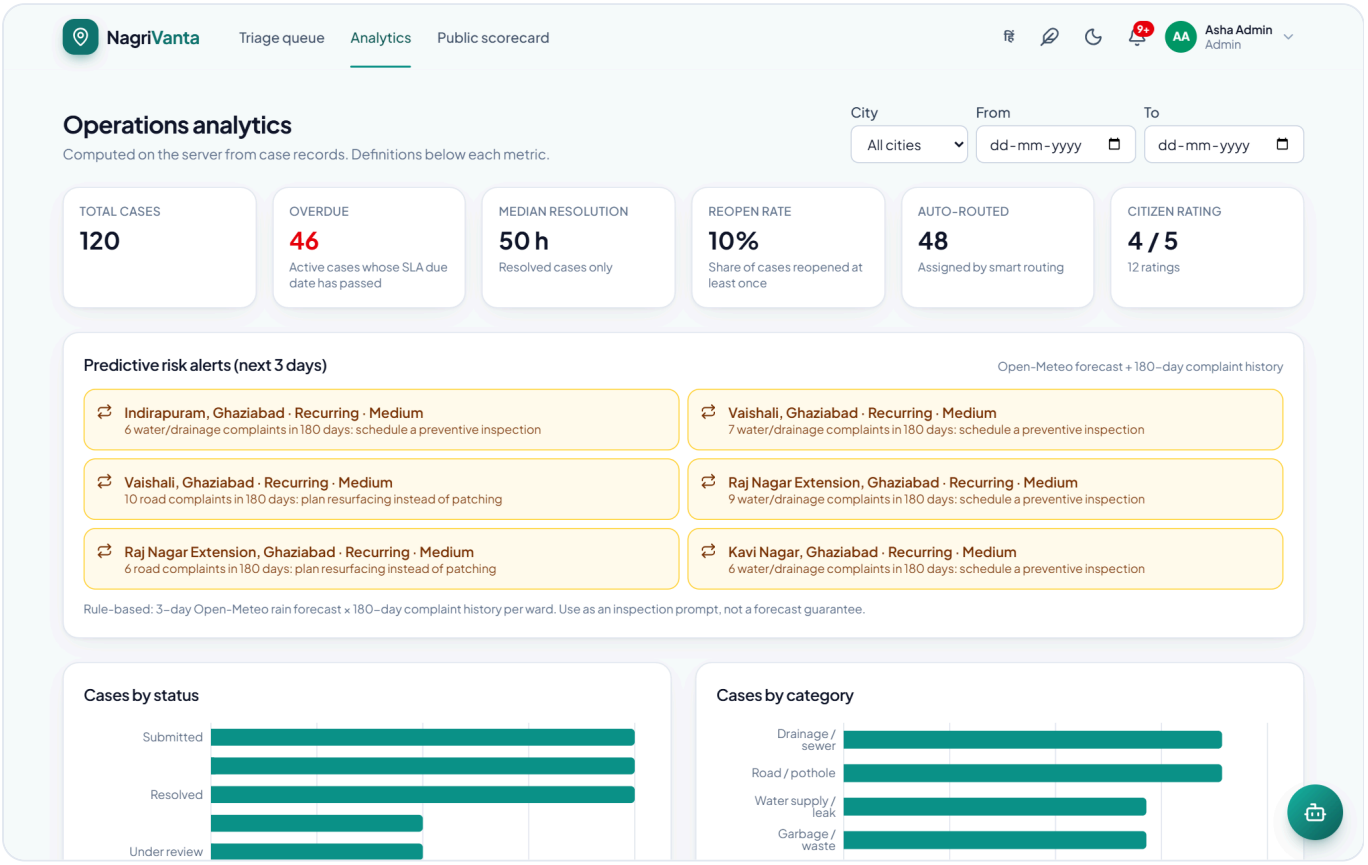

Admin case view: routing reason, location, intact history, priority score, triage and assignment.

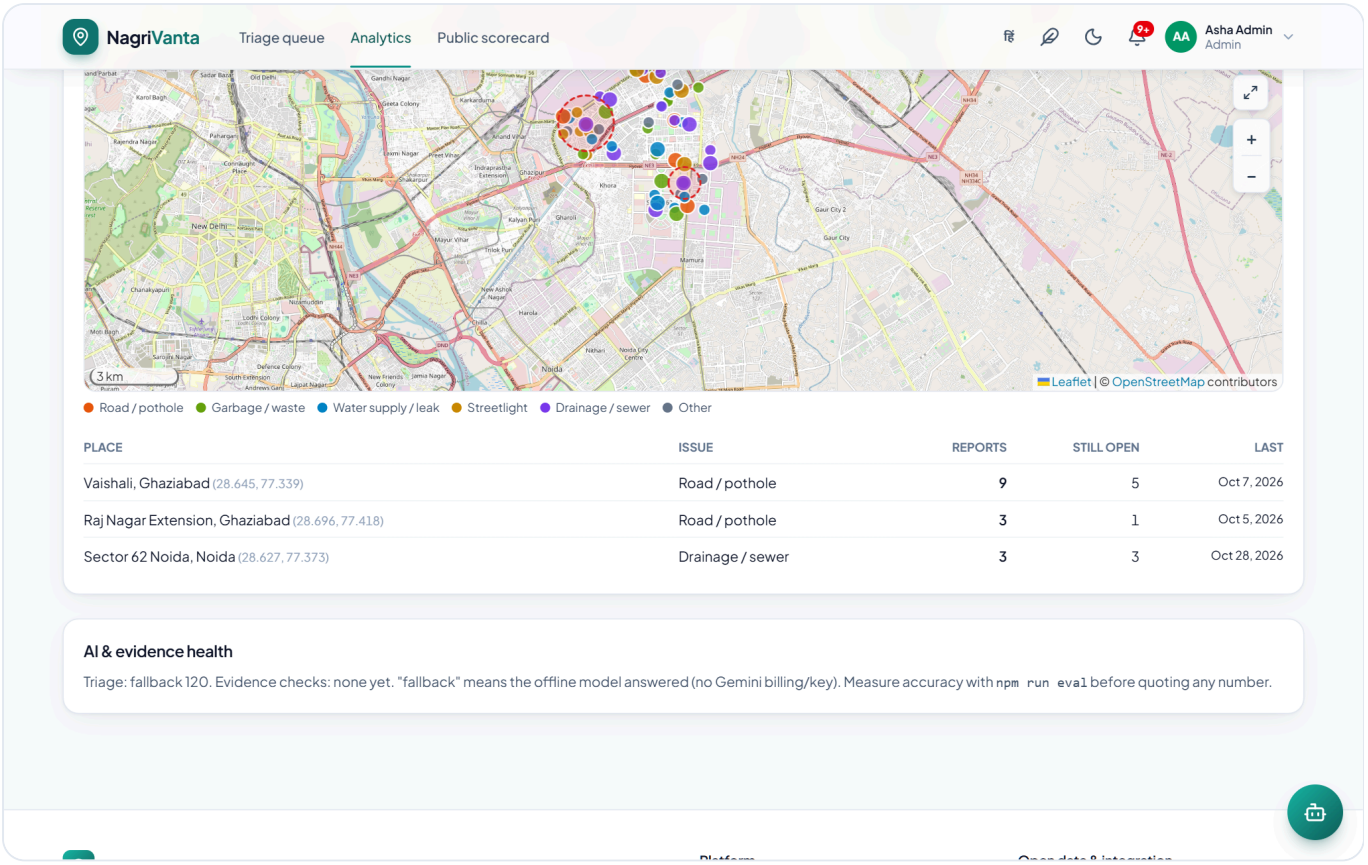

9. For administrators (continued)

Analytics

Filter by city and date range. You see total, overdue, median resolution, reopen rate, auto-routed share and citizen rating, plus **predictive risk alerts** (3-day rain forecast × 180-day complaint history per ward), cases by status and category, the 30-day trend, top wards, intake channels and **officer workload**.

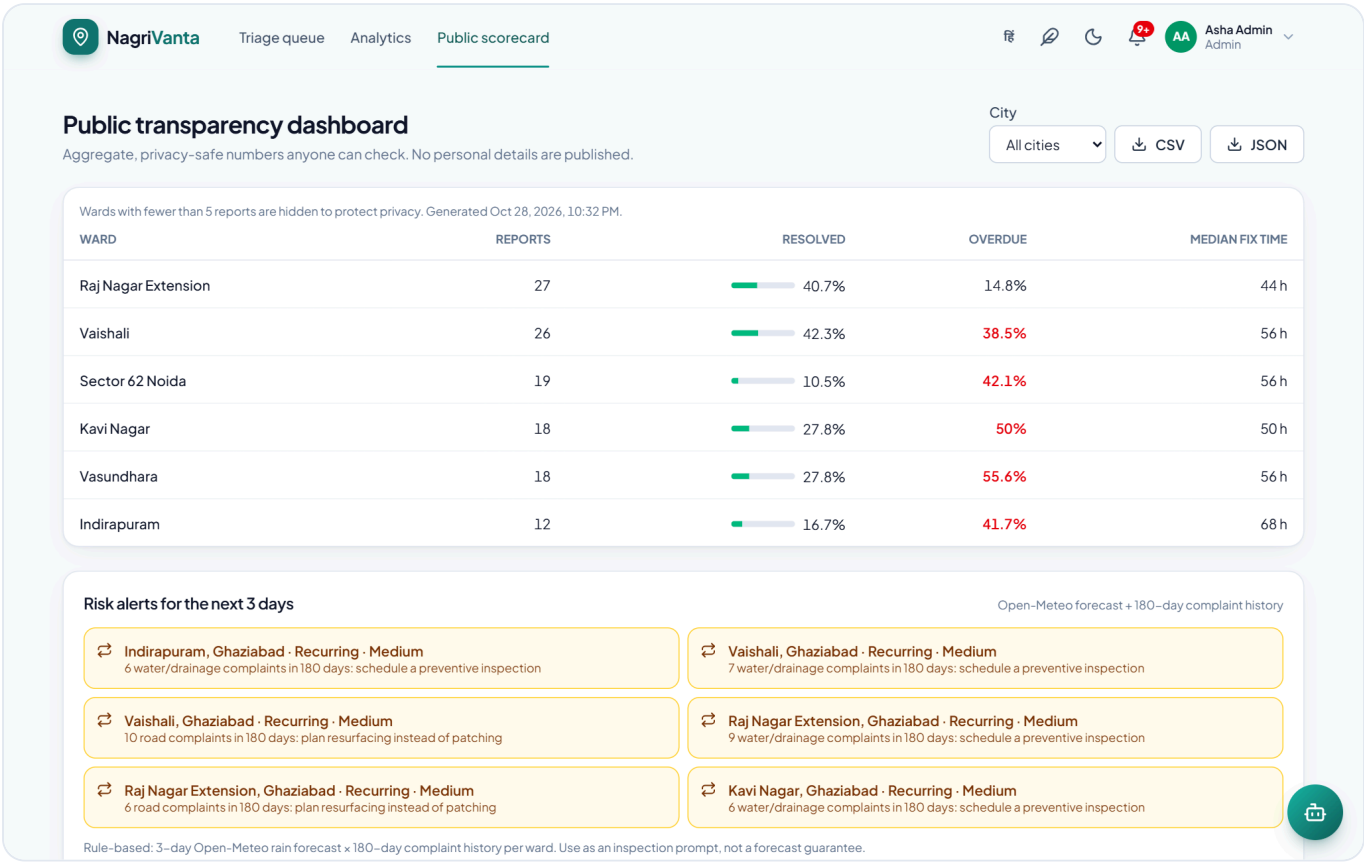

Analytics overview with risk alerts.

Recurrence heatmap: dashed red rings mark hotspots, listed in the table below the map.

10. Public transparency & open data

The **Public scorecard** is open to everyone: per ward, the number of reports, the share resolved, the share overdue and the median fix time. Wards with fewer than 5 reports are hidden to protect privacy. It also shows risk alerts, categories, a hotspot map and table.

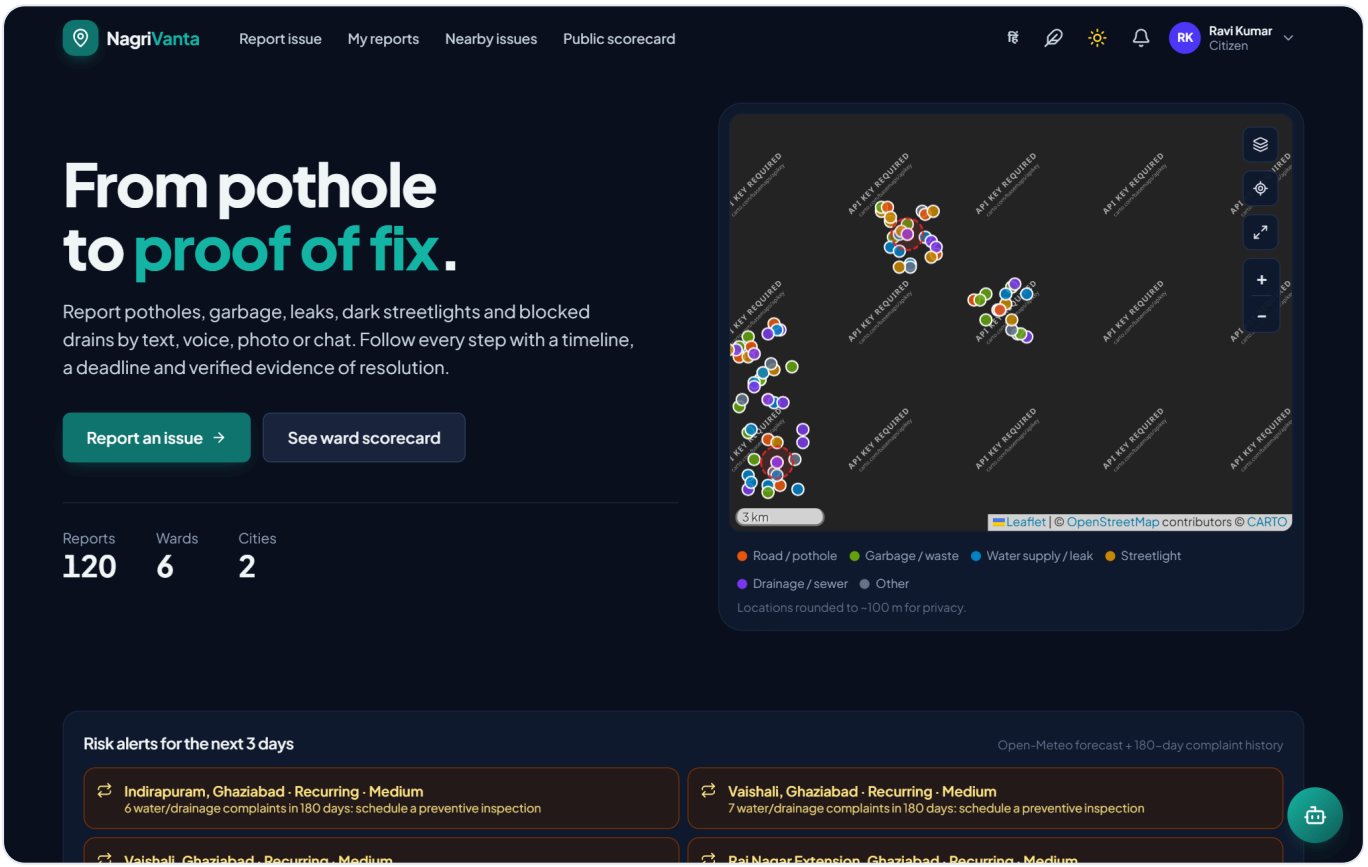

Public transparency dashboard.

- **Open data:** the CSV and JSON buttons download anonymised records (no names or free text; locations rounded to about 110 m), licensed CC BY 4.0.
- **Integration:** municipal and partner systems can read and file cases through the standard **Open311 GeoReport v2** API and receive signed webhooks. The partner's own ID is stored, so one case keeps one shared ID.

11. Language, dark mode, Lite & offline

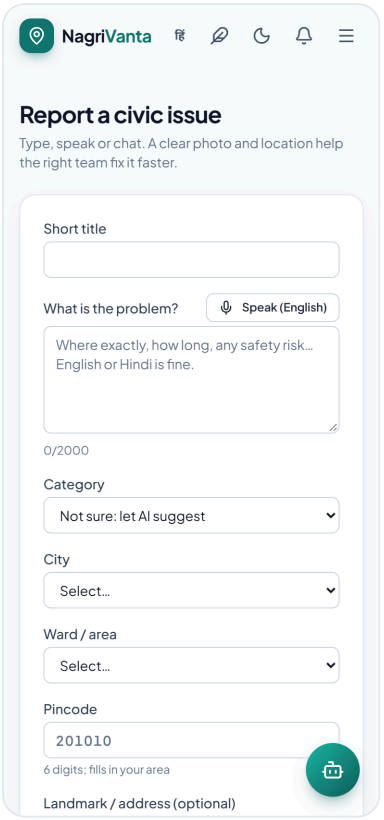

Setting	How	Why
Hindi / English	हिं / EN button in the header, or Profile → Settings	Menus, forms, statuses, guide, FAQ and assistant replies in Hindi; voice input listens in Hindi.
Dark mode	Moon/sun button (one tap toggles)	Comfortable at night; the Default map style switches to a dark map.
Lite mode	Feather button	Saves data: no map tiles, smaller photos. Turns on by itself on 2G or Data Saver.
Offline	Automatic	No signal? Reports are saved on the device ("waiting to be sent") and sent automatically when you are back online.
Reduced motion	Your phone/computer setting	All animations switch off if your system asks for reduced motion.

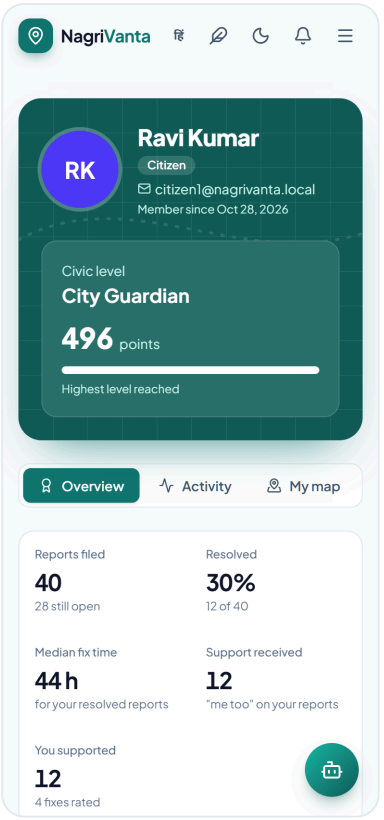

Dark mode.

12. The mobile app & phone browser

The website works fully on phones. There is also a native app for Android and iOS (built with Expo) that uses the same account and data.

Report form on a phone.

Profile on a phone.

In the app

- **Sign in / create account** on the first screen.
- **Report:** camera or gallery photos, GPS location (or from photo GPS), ward chips, duplicate hints. Use the keyboard microphone to speak.
- **My reports**, **Nearby** with "Me too", **Assistant** chat, **Profile** (level, stats, badges, activity, settings).
- Officers: **Queue**, status updates and after-photos.
- No signal? Reports wait in an outbox and send when the app is opened online.
- Header buttons: **हिं/EN**, light/dark, sign out.

Running the app (developers): install Expo Go, set `EXPO_PUBLIC_API_URL` in `mobile/.env` to the API address, run `npx expo start` and scan the QR code. See the README for building an installable APK.

13. Feature quick reference

#	Feature	Where you use it
1	Multi-channel intake	Web form, mobile app, voice (Speak), AI assistant chat, Open311 API
2	Photo/video with auto metadata	Report form: photo time and GPS read automatically
3	AI classification (image + text)	Case page → "Triage suggestion"
4	AI summary & priority	Case page: summary, priority, score breakdown (staff)
5	Smart department routing	Automatic; "AUTO" in the queue, routing reason on the case
6	Duplicate detection	Report form hints; "Possible duplicates" for staff
7	Real-time tracking & notifications	Bell icon, browser notifications, live case page, Track page
8	SLA monitoring & escalation	Target date on every case; Overdue filter; analytics
9	Before/after evidence verification	Case page → "Resolution & evidence check"
10	Ward analytics & recurrence heatmap	Analytics; Scorecard hotspots
11	Predictive risk alerts	Home, Analytics, Scorecard
12	Public transparency & open data	Public scorecard, CSV/JSON downloads
13	Hindi / local language	हिं button, Hindi voice, Hindi assistant
14	Offline & low-bandwidth	Automatic outbox; Lite mode button
15	Government integration	Open311 API, signed webhooks (for IT teams)
16	Role-based access	Citizen / officer / admin accounts
17	Community feedback & ratings	"Me too", star ratings, reopen
18	Multi-city	City selector on reports, queue, analytics, scorecard
+	Advanced profile	Avatar menu → My profile
+	Map styles, search, locate, full screen	Every map
+	Pincode lookup	Report form
+	Public tracking & share link	Track a report; after submitting
+	How it works, FAQ, About	Top navigation when signed out; footer

14. Help, privacy & emergencies

Emergency? NagriVanta is not an emergency service. If anyone is in danger (accident, fire, gas leak, fallen live wire, collapse), call **112** first, then report here.

Privacy

- Your name, contact details and exact location are visible only to staff handling your case.
- Public pages and open data are anonymised; locations are rounded to about 100 m and small groups are hidden.
- Photos are re-encoded before storage, which removes hidden metadata, and are served from unguessable links.

Where to get more help

- **How it works** and **FAQ** in the top navigation (the FAQ has a search box and Hindi answers).
- The **AI assistant** (bottom right) answers questions and checks case status.
- **About** explains the principles, what the platform is and is not, and links to the open-source code.

Good to know

- AI only *suggests*; authorised staff make every decision, and every change is recorded.
- NagriVanta is an independent pilot, not an official government portal. The live demo uses synthetic data for Ghaziabad and Noida.
